

PEAK PERFORMANCE COMPOUNDING, LLC. ADDS DEDICATED WHITE ROOM FOR MEDICAL MATERIAL PROCESSING

Leominster, MA - (October 18, 2022) - Peak Performance Compounding, LLC now offers medical polymer compounding in a dedicated white room environment. Peak has become a leading player in the medical material community by offering fast lead times, no minimum run sizes and flexibility with customer requirements. Peak's experienced staff understands the unique needs of the medical device market and strictly adheres to the quality and regulatory standards of the industry.

The 1,000 square foot white room is climate controlled and equipped with a 32mm co-rotating twin-screw extruder, which is dedicated to medical material processing. This medical compounding line offers multiple feeders for dispersion of highly filled materials and is suited to process commodity resins (including PE, PP, PS & ABS), engineering polymers (including PEBA, PA 11/12 & PC) and high-temperature materials (including PEEK, PAEK, PEKK, PSU & PEI).

1,000 square foot white room in Leominster, MA

"Our team has extensive experience in medical material processing, and we look forward to serving medical manufacturers with the highest degree of material quality and service," says Todd Marchand, President of Peak Performance Compounding, LLC. Compounding capabilities include custom-colored polymers and radiopacified materials (using Barium Sulfate, Bismuth Subcarbonate, Bismuth Oxychloride & Tungsten) for Class I and Class II medical device applications, including minimally invasive devices and components.

About Peak Performance Compounding, LLC: Peak Performance Compounding, LLC. is a leading custom compounder and toll processor for the plastics industry. Peak offers processing of many different grades of engineering and commodity resins, as well as medical grade polymers. Peak offers twin screw technology that allows for processing advanced materials, highly filled polymers and pre-colored precision compounds.
